

If sudo not recognized as internal command

<https://prathapreddy-mudium.medium.com/vboxuser-is-not-in-the-sudoers-file-this-incident-will-be-reported-enable-sudo-in-ubuntu-resolved-305e7988c6bc>

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

```
vbox@Ubuntu16:~$ man sudo_root
vbox@Ubuntu16:~$ sudo apt-get update
[sudo] password for vbox:

vbox@Ubuntu16:~$ sudo cp /etc/ssh_config/etc/ssh/sshd_config.factory-defaults
cp: missing destination file operand after '/etc/ssh_config/etc/ssh/sshd_config.factory-defaults'
Try 'cp --help' for more information.
vbox@Ubuntu16:~$ sudo cp/etc/ssh_config/etc/ssh/sshd_config.factory-defaults
sudo: cp/etc/ssh_config/etc/ssh/sshd_config.factory-defaults: command not found
vbox@Ubuntu16:~$ sudo cp /etc/ssh_config/etc/ssh/sshd_config.factory-defaults
cp: missing destination file operand after '/etc/ssh_config/etc/ssh/sshd_config.factory-defaults'
Try 'cp --help' for more information.
vbox@Ubuntu16:~$ cp --help
Usage: cp [OPTION]... [-T] SOURCE DEST
  or: cp [OPTION]... SOURCE... DIRECTORY
  or: cp [OPTION]... -t DIRECTORY SOURCE...
Copy SOURCE to DEST, or multiple SOURCE(s) to DIRECTORY.

```

Mandatory arguments to long options are mandatory for short options too.

```

-a, --archive          same as -dR --preserve=all
--attributes-only      don't copy the file data, just the attributes
--backup[=CONTROL]    make a backup of each existing destination file
-b                    like --backup but does not accept an argument
--copy-contents        copy contents of special files when recursive
-d                    same as --no-dereference --preserve=links
-f, --force            if an existing destination file cannot be
                      opened, remove it and try again (this option
                      is ignored when the -n option is also used)
-i, --interactive      prompt before overwrite (overrides a previous -n
                      option)
-H                    follow command-line symbolic links in SOURCE
-l, --link             hard link files instead of copying
-L, --dereference      always follow symbolic links in SOURCE
-n, --no-clobber       do not overwrite an existing file (overrides
                      a previous -i option)
-P, --no-dereference   never follow symbolic links in SOURCE
-p                    same as --preserve=mode,ownership,timestamps
--preserve[=ATTR_LIST] preserve the specified attributes (default:
                      mode,ownership,timestamps), if possible
                      additional attributes: context, links, xattr,
                      all

```

- no-preserve=ATTR_LIST don't preserve the specified attributes
- parents use full source file name under DIRECTORY
- R, -r, --recursive copy directories recursively
- reflink[=WHEN] control clone/CoW copies. See below
- remove-destination remove each existing destination file before attempting to open it (contrast with --force)
- sparse=WHEN control creation of sparse files. See below
- strip-trailing-slashes remove any trailing slashes from each SOURCE argument
- s, --symbolic-link make symbolic links instead of copying
- S, --suffix=SUFFIX override the usual backup suffix
- t, --target-directory=DIRECTORY copy all SOURCE arguments into DIRECTORY
- T, --no-target-directory treat DEST as a normal file
- u, --update copy only when the SOURCE file is newer than the destination file or when the destination file is missing
- v, --verbose explain what is being done
- x, --one-file-system stay on this file system
- Z set SELinux security context of destination file to default type
- context[=CTX] like -Z, or if CTX is specified then set the SELinux or SMACK security context to CTX
- help display this help and exit
- version output version information and exit

By default, sparse SOURCE files are detected by a crude heuristic and the corresponding DEST file is made sparse as well. That is the behavior selected by --sparse=auto. Specify --sparse=always to create a sparse DEST file whenever the SOURCE file contains a long enough sequence of zero bytes. Use --sparse=never to inhibit creation of sparse files.

When --reflink[=always] is specified, perform a lightweight copy, where the data blocks are copied only when modified. If this is not possible the copy fails, or if --reflink=auto is specified, fall back to a standard copy.

The backup suffix is '~', unless set with --suffix or SIMPLE_BACKUP_SUFFIX. The version control method may be selected via the --backup option or through the VERSION_CONTROL environment variable. Here are the values:

- none, off never make backups (even if --backup is given)
- numbered, t make numbered backups
- existing, nil numbered if numbered backups exist, simple otherwise
- simple, never always make simple backups

As a special case, cp makes a backup of SOURCE when the force and backup options are given and SOURCE and DEST are the same name for an existing, regular file.

GNU coreutils online help: <<http://www.gnu.org/software/coreutils/>>

Full documentation at: <<http://www.gnu.org/software/coreutils/cp>>

or available locally via: info '(coreutils) cp invocation'

vbox@Ubuntu16:~\$ **sudo gedit /etc/ssh/sshd_config**

Changes to be made in configuration file

1. Disable password authentication by changing this line in the configuration file

#PasswordAuthentication yes to PasswordAuthentication no.

2. Add the following Lines to the End (Check username for eg. Slii here)

AllowUsers slii

PermitRootLogin no

PubkeyAuthentication yes

3. Change LogLevel INFO to LogLevel VERBOSE.

4. Save and Restart SSH

(gedit:7222): Gtk-WARNING **: Calling Inhibit failed:

done.
Done.

Step 2: Downloading and Installing Hadoop

Extract the hadoop.tar.gz file and keep it in Home

```
vbox@Ubuntu16:~$ sudo mv hadoop /usr/local/  
vbox@Ubuntu16:~$ sudo chown -R vbox:vbox /usr/local/hadoop  
// vbox is user name yours can be Pl123, silli,etc see highlighted before @  
vbox@Ubuntu16:~$ sudo apt-get install vim  
Reading package lists... Done  
Building dependency tree
```

Reading state information... Done

The following additional packages will be installed:

vim-runtime

Suggested packages:

ctags vim-doc vim-scripts vim-gnome-py2 | vim-gtk-py2 | vim-gtk3-py2
| vim-athena-py2 | vim-nox-py2

The following NEW packages will be installed:

vim vim-runtime

0 upgraded, 2 newly installed, 0 to remove and 10 not upgraded.

Need to get 6,205 kB of archives.

After this operation, 30.0 MB of additional disk space will be used.
